Professional Summary

Motivated computing student with practical experience in Laravel, PHP, MySQL, MVC architecture, REST API concepts, Git, and full-stack web application development. Built and deployed ReLoop, a Laravel-based peer-to-peer marketplace with product management, rentals, swaps, payments, admin moderation, and real-time notifications. Seeking the Junior Laravel Developer role at Firefly IT Solutions to contribute to real projects while improving backend development, debugging, documentation, and teamwork skills.

Technical Skills

Backend: PHP, Laravel, Node.js, REST APIs, MVC Architecture, Server-side Validation

Frontend: HTML, CSS, JavaScript, React.js, Blade, Tailwind CSS, Alpine.js

Databases: MySQL, PostgreSQL, MongoDB, Database Design, Normalization

Tools: Git, GitHub, Composer, npm, Vite, VS Code, Docker Basics, Railway, Render

Projects

ReLoop — Peer-to-Peer Marketplace Platform

Laravel, PHP, MySQL, Blade, Tailwind, Pusher

- Developed a Laravel-based marketplace where users can buy, rent, and swap products.
- Built backend logic using MVC structure with routes, controllers, models, migrations, and relationships.
- Designed MySQL tables for users, products, rentals, swaps, orders, payments, and notifications.
- Added product listing, user roles, admin moderation, rental requests, swap offers, and payment-related flows.
- Integrated real-time notifications using Pusher and Laravel Echo.
- Debugged routing, database, Vite build, environment, and deployment issues during development.
- Live: reloop-np.me

News Sentiment Analyzer

React, Node.js, MongoDB, NLP

- Created a web application that analyzes news content as positive, negative, or neutral.
- Built a simple user interface for text input and sentiment result display.
- Practiced frontend-backend integration, text processing, deployment, and testing.
- Live: newssentimentanalyzer-4bvf.onrender.com

HRMS — Human Resource Management System

JavaScript, Database Design, Git

- Worked on an HR management system with employee and record management features.
- Practiced CRUD development, database-backed features, and structured project development.
- Used Git and GitHub for version control and project tracking.
- GitHub: github.com/codezenithnp/HR-ms

Green Thrifts — Thrift Store Platform

JSP, Servlets, MySQL

- Developed a dynamic thrift store web application with customer and admin features.
- Implemented product CRUD, shopping cart, order handling, and user management.
- Practiced session handling, MVC structure, JDBC, and database operations.

Education

BSc (Hons) in Computing

2022 – Present

Informatics College Pokhara, Nepal

- Relevant coursework: Web Development, Database Systems, Software Engineering, Advanced Programming, Cloud Services, and Programming Fundamentals.

Additional Experience

- Practiced MERN stack basics through small projects such as Todo App and Weather App.
- Gained experience with API usage, CRUD operations, Git workflow, and deployment platforms.
- Prepared academic documentation including ERD, DFD, UML diagrams, test cases, implementation reports, and project reflections.

Personal Strengths

- Strong problem-solving attitude with ability to debug technical issues patiently.
- Comfortable working independently and in team-based development environments.
- Willing to learn, improve code quality, and follow professional development practices.
